EDUCATION

Global Academy @ Siam University, Bangkok, Thailand

November 2028

Bachelor of Computer & Data Science

Bachelor of Software Engineering

GPA: 3.6

Relevant Coursework: *Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, System Analysis & Design, User Interface Design, Data Science, Computer Networks & Data Communication, Computer Architecture & Operating Systems, Calculus, Linear Algebra, Discrete Mathematics, Introduction to Probability and Statistics*

WORK EXPERIENCE

Happy Three Creation, Backend Developer Intern, Bangkok, Thailand

February 2026 - May 2026

- Refactored large-scale legacy Node.js + Express backend services into layered architecture patterns, improving maintainability, separation of concerns, and scalability across multiple production systems.
- Built and optimized complex pricing, ticketing, and enrollment systems supporting course bundles, promotions, multi-format purchases, payment approval flows, and automated course activation across checkout pipelines.
- Designed and implemented RESTful APIs using Node.js, Express, Sequelize, and PostgreSQL for e-learning, CMS, and e-commerce platforms, including coupon systems, administrative tools, commission tracking, and role-based access control.

Pantech Digital, MarTech Operations & Business Growth Intern, Singapore

October 2025 - January 2026

- Supported regional performance marketing operations across Thailand, Vietnam, and SEA at a Singapore-headquartered martech/adtech company; collaborated with APAC HQ teams to deliver local market insights and bilingual (English-Thai) support.
- Managed affiliate and social commerce infrastructure, including TikTok Shop affiliate links, region-based TikTok and Gmail account setup (IP/location compliance), and end-to-end tracking validation through test purchases and performance monitoring.
- Analyzed e-commerce and affiliate data using APIs (Amazon, Lazada, TikTok, Shopee, Shein); transformed JSON datasets into Excel reports, researched market trends and high-performing content, and delivered actionable insights to management.

YOUTH IFO, Computer Science Teacher, Yangon, Myanmar

January 2024 - May 2024

- Delivered high-quality Computer Science instruction, building strong conceptual understanding in programming, algorithms, and computational thinking to drive academic achievement.
- Designed and implemented lesson plans, assessments, and learning resources aligned with curriculum standards and differentiated to meet diverse student needs.
- Applied reflective and adaptive teaching practices to continuously improve instructional methods and support learners in achieving strong academic outcomes.

PROJECTS

FindYourCrib (FYC), *TypeScript / Node.js / PostgreSQL*

May 2026

- Architected a full-stack real estate rental marketplace using Node.js, Express.js, TypeScript, and PostgreSQL, implementing a Prisma ORM relational schema supporting property listings, featured content, dynamic homepage sections, and role-based access control.
- Designed and built a RESTful API layer with JWT-based authentication, protected route middleware, and property CRUD endpoints including advanced filtering, retrieval, and media/image handling for scalable property data management.
- Engineered an admin-ready backend architecture with layered separation of concerns, enabling extensible backoffice API surfaces, structured business logic enforcement, and a scalable foundation for multi-role marketplace operations.

Sports Court Booking System (SCBS), *TypeScript*

December 2025

- Developed a scalable TypeScript-based sports court booking platform supporting real-time court reservations and scheduling workflows.
- Engineered the core booking engine with booking lifecycle management, status transitions, conflict resolution, and time-slot overlap detection to prevent double bookings.
- Designed and implemented RESTful APIs while enforcing business rules, input validation, and data consistency for reliable high-volume booking operations.

ExpireSense, *Flutter*

April 2025

- Led end-to-end development of a smart food management platform for food expiry tracking, inventory management, and waste reduction.
- Conducted market research, product strategy, workflow design, and system architecture aligned with business and technical requirements.
- Coordinated cross-functional development, software testing, and product delivery across the full project lifecycle.

SKILLS

- *Technical Skills:*
 - *Languages:* Java, Python, C#, TypeScript, JavaScript, Dart
 - *Frameworks:* Spring Boot, Streamlit, .NET, Node.js, Express.js, Flutter
 - *Databases:* SQL, PostgreSQL, MySQL
 - *Tools:* Git, GitHub, Sequelize, Postman, DBeaver, Prisma, Vercel, Render, Supabase, Cloudinary
 - *Workflows:* Agile Development, Scrum
 - *Concepts:* REST APIs, Backend Architecture, Payment Workflows, Database Design, Booking Systems
- *Language Skills:*
 - Burmese - Native
 - English - Full Professional Proficiency
