

Pyae Sone Htoo (Kai)

Software Engineer | Full Stack, AI & Automation

Bangkok, Thailand | +66 (0) 811 199 612 | pshkai.business@gmail.com

LinkedIn: [linkedin.com/in/pshkai](https://www.linkedin.com/in/pshkai) | GitHub: github.com/pshkai | Portfolio: pshkai.github.io/portfolio/

PROFESSIONAL SUMMARY

Software engineer focused on full-stack applications and AI automation for customer service, marketing and internal operations. Builds TypeScript/Node.js and Python APIs, React/Next.js interfaces and n8n workflows integrating LLM agents and business platforms. Translates business requirements into secure integrations, tested software and reviewable prototypes.

PROFESSIONAL EXPERIENCE

AitsCCTV | Full Stack, AI & Automation Engineer

Sep 2026 – Present

Bangkok, Thailand

- Developed bilingual Thai/English n8n workflows integrating LINE Messaging API, GPT and Gemini agents for FAQ handling, persistent conversation state, installation intake and human handoffs; implemented webhook signature verification, duplicate-event checks and quotation tracking for internal testing.
- Built and installed four n8n marketing-intelligence workflows integrating AI research, source verification, Thai content drafting, SMTP briefings and ClickUp review; validated 38 offline checks and 8 agent-contract tests, and defined content approval and pilot requirements.
- Built a Next.js, React and TypeScript website rebuild covering 36 captured routes, responsive layouts, SEO metadata and Thai/English navigation; passed build, type checks and browser regression checks across four viewport widths, and defined a phased roadmap for website restructuring and technical SEO.
- Prototyped a FastAPI CCTV and Wi-Fi floor-plan tool with PDF/DXF import, schema-constrained AI analysis, editable device placement, 3D views and SVG/PDF export; lead product ownership by translating stakeholder needs into business rules, acceptance criteria and delivery priorities.

Marketing Bear | Generative AI Creative Production Intern

Jun 2026 – Sep 2026

Bangkok, Thailand

- Developed repeatable generative AI production workflows from ideation and competitor research through storyboard revisions, human approval, character reference sheets, panels, and director scripts.
- Used ChatGPT and Claude to develop generation prompts; iteratively tested and evaluated Seedance 2.0 / 2.5 and Higgsfield video outputs for generation consistency and visual continuity.
- Edited selected AI-generated assets in CapCut, refining voiceover, sound, and pacing for final short-form videos.

Happy Three Creation | Backend Developer Intern

Feb 2026 – May 2026

Bangkok, Thailand

- Refactored Node.js and Express.js services into layered backend architectures for e-learning, CMS, and commerce systems while preserving existing API behavior.
- Implemented REST APIs with Sequelize and PostgreSQL for course management, enrollment, pricing, coupons, CMS/admin tools, and commissions, translating business requirements into backend logic.
- Built order, payment-approval, pricing, and automated course-activation workflows with validation and state handling for checkout and enrollment.
- Created Sequelize models and database migrations, validated endpoints with Postman, and debugged production data, permissions, and integration issues.

Pantech Digital | MarTech Operations & Business Growth Intern

Oct 2025 – Jan 2026

Singapore

- Analyzed e-commerce API/JSON data and created structured Excel reports for regional market and performance analysis.
- Supported affiliate tracking validation, test purchases, account and location-compliance operations, and coordination with APAC stakeholders.

CORE TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Backend & Frontend: Node.js, NestJS, Express.js, FastAPI, React, Next.js

AI & Integrations: n8n, OpenAI GPT, Gemini, LLM agents, prompt engineering, structured outputs, knowledge retrieval, LINE Messaging API, ClickUp API, SMTP

Databases & ORMs: PostgreSQL, MySQL, Prisma, Sequelize, Supabase

APIs & Security: REST APIs, webhooks, JWT authentication, httpOnly cookies, role-based access control, input validation, webhook signature verification

Cloud & Delivery: Render, Vercel, Supabase Storage, Cloudinary, GitHub Actions, CI/CD

Testing & Engineering: Jest, Playwright, Postman, unit/integration testing, Git/GitHub, layered architecture, database migrations, production debugging

SELECTED TECHNICAL PROJECTS

FindYourCrib | *TypeScript, NestJS, Next.js, PostgreSQL, Prisma, Jest*

2026

Live: findyourcrib.vercel.app/ | GitHub: github.com/pshkai/findyourcrib

- Built a full-stack TypeScript property marketplace with a NestJS API, Next.js frontend, shared contracts, PostgreSQL, and Prisma for renter, agent, and administrator workflows.
- Implemented email/password authentication, httpOnly JWT cookies, password recovery, role-protected dashboards, listing CRUD, inquiries, favorites, and admin moderation.
- Designed relational schemas and migrations; added signed Supabase media uploads, validation, rate limiting, origin protection, request logging, stable API errors, and health/readiness endpoints.
- Added 64 passing Jest backend tests, Playwright public smoke tests, GitHub Actions CI, and deployment runbooks for Vercel and Render.

ExpireSense Prototype | *Flutter, FastAPI, Supabase, Python, OCR*

2025

Website: expiresense.com/ | LinkedIn: linkedin.com/company/expiresense/

- Led product strategy and prototype development for a Flutter-based food management application covering inventory, expiry tracking, OCR-assisted receipt capture and reminders.
- Conducted market research and translated user needs into workflows and system architecture using Flutter, FastAPI, Supabase and Python; coordinated cross-functional development, software testing and prototype delivery.

Never Give Up Site Blocker | *JavaScript, Chrome Manifest V3*

2026

GitHub: github.com/pshkai/adult-site-blocking-extension

- Built a Chrome extension that parses a public adult-domain hosts list, stores domains locally, and blocks navigation using declarativeNetRequest rules, a fallback list, and a webNavigation guard.

EDUCATION

Global Academy @ Siam University

Expected Nov 2028

Dual Degree: Bachelor of Computer & Data Science and Bachelor of Software Engineering

Bangkok, Thailand | GPA: 3.6/4.0

Relevant coursework: Data Structure and Algorithms, Object Oriented Programming, Database System, System Analysis and Design, Data Science, Data Analytics and Data Visualizations, Computer Network and Data Communication, UX/UI Design, Ethics and Information Security

LANGUAGES

Burmese (Native) | English (Full professional proficiency)
